

## Gangway safety net

Gangway safety nets are hanged under ladders and gangways in order to ensure safe passage in the gangway. On sailing and motor-sailing vessels, gangway safety nets are attached under the bowsprit and sometimes under the foot horse-ropes. The nets are manufactured from durable polypropylene or manila rope in accordance with the industry standards and process guidelines. An original manufacturer's quality certificate is issued for each product.

**Product code: 1013102100**

**Material: polyamide or polypropylene rope 4-6 mm in diameter.**
