

 **Pilot ladder**

Ship rope ladder is essentially a ladder with wooden steps. These wooden steps are called ladder rungs. The ship rope ladder is usually lowered along the outer side and serves to climb onto the ship. The correct location of the ladder is at the side of the vessel at the place of embarkation in collective life-saving appliances - lifeboats, liferafts, boats and other floating crafts.

Pilot Ladder's durable and tight structure sustains 10-fold + loads when testing and has a variety of advantages. The ladder rungs are firmly fixed on the string in strictly horizontal position and have reliable covering from hard-wooded species.

**Manufacture in compliance with the requirements of SOLAS 74 as amended Reg. III/4; Reg. III/11; Reg. X/3 IMO Res. MSC 81(70); IMO MSC1/Circ. 1285; ISO 5489.**

**Are delivered with the original Manufacturer Certificate for the batch.**

*You can buy pilot ladders in the sized from 3 to 28 meters.*
