

Fire-fighting bucket

Conical fire bucket refers to equipment designed to carry water, various liquids, sand, ground or snow to fight a fire. It is convenient to use it to maximally protect a person from exposure to high temperatures, because can be operated from a distance of several meters from the source of fire.

Product code: 1828108100

Why is the fire bucket conical?

It is quite simple to explain why the fire bucket is conical. There are several reasons for this, while the most important are:

1. The conical shape of the bucket makes it easier to collect or scoop up water, sand or other materials. When immersed in water, you feel less resistance than with a regular bucket.

2. A conical bucket is easier to take with two hands, especially with gloves.

3. With the spike of the cone it is convenient and easy to break through the ice in winter.

4. Conical bucket does not pinch you on when running or walking.

5. Liquid or material thrown from such a bucket, due to the shape, goes further and more accurately. This is important in high temperature fire conditions and more safe for firefighter.

Specifications:

- Volume - 8 liters;
- Weight - 900 g;
- Material - tin;
- Height with the raised handle - 415 mm;
- Maximum diameter - 275 mm;
